SOUTHERN DIVISION

October 20, 1981

Mr. Carl Johnson  
Sunshine Mining Company  
P.O. Box 130  
Eureka, UT 84628

Dear Mr. Johnson:

This letter will confirm our conversation this date regarding the consideration of "raptor protection" in the construction of 46 KV facilities which will be installed to serve your Apex #2 mining operations.

For several years, Utah Power & Light Company has had an active program to protect birds-of-prey from powerline electrocution. Upon detailed research into the possible solutions of the problem and following documentation of raptor electrocutions, Utah Power & Light began formulating procedures and developing designs and methods which would eliminate raptor electrocutions on our powerline structures.

At present, we adhere to suggested practices for raptor protection on powerlines and such practices will be incorporated into the design and construction of all facilities which must be installed to provide service to you.

If we may provide further information on the matter, please advise us accordingly.

Sincerely,

G. Robert Thompson  
Special Representative
